Abstract. With the establishment of a journal devoted to the subject, there can be no doubt that nuclear technology has come of age. On this occasion, it seems appropriate to review the history of nuclear physics and something of the way in which the science back of nuclear engineering started.

Fusion energy research rests directly on our scientific knowledge of nuclear reactions—nuclear physics. Unlike electromagnetism, special relativity and quantum mechanism—theories that are fairly complete and describe phenomena in terms of a few basic equations—nuclear physics is still developing. Scientists do not have anywhere near the level of understanding of nuclear forces—the ...

Chapter 2. Nuclear physics 17 This is the process used in conventional nuclear power plants. Here, the amount of reactions is moderated by engulfing the nuclei of type A, usually uranium, in a material which efficiently stops nuclei of type B, here neutrons. If this moderator is reduced, the number of reactions increases.

History. The history of nuclear physics as a discipline distinct from atomic physics starts with the discovery of radioactivity by Henri Becquerel in 1896, while investigating phosphorescence in uranium salts. The discovery of the electron by J. J. Thomson a year later was an indication that the atom had internal structure.
